# Background

- **Not so performant**
  - 23% to 45% of CVD deaths had not been classified at “high risk” by SCORE
- **Better performance measured by:**
  - NRI=Net Reclassification Improvement  
= %correct reclassification - %incorrect reclassification
  - CNRI=Clinical NRI  
= NRI in those classified at intermediate risk by SCORE

# Research question

- Risk reclassification by non-invasive markers of subclinical atherosclerosis?

- Would it be effective or cost effective?

# Results – Clinical review

## ■ Net reclassification:

Marker	Stud -ies.	N	Quality of evidence	NRI% (95%CI)	CNRI% (95%CI)	Subgroup
1. Coronary Artery Calcium Score (CAC)	7	13 685	High	14.0 (NR)	21.7 (NR)	Lowest value
				25.0 (16; 34)	54.8 (41; 69)	Highest value
2. Ankle-Brachial Index (ABI)	5	46 082	Moderate	4.3 (0.0; 7.6)	15.9 (6.1; 20.6)	Men
				9.6 (6.1; 16.4)	23.3 (13.3; 62.5)	Women
3. Carotid Plaques (CP)	3	22 924	High	7.7 (2.3; 11.4)	17.7 (10.9; 24.7)	-
4. Aortic Pulse Wave Velocity (aPWV)	3	20 275	Moderate	4.9 (4.0; 5.9)	14.8 (12.4; 17.1)	-
5. Carotid Intima Media Thickness (cIMT)	2	48 703	High	0.3 (0.1; 1.0)	3.0 (2.7; 4.0)	-
6. Flow-mediated dilation (FMD)	2	3 020	Very low	NA	NA	-

## ■ Clinical risk-benefit: no study

# Results – Economic review

Limited evidence

Only for CAC

- 5 US based studies (4 cost-utility and 1 cost-effectiveness)
- Only 2 published after 2008 (using as input clinical studies reporting NRI)

Uncertain results

No robust data on the long-term consequences of treating patients pharmacologically in response to CAC scores

- No data on the effectiveness of statins in patients with significantly elevated CAC scores
- No good data on adherence

# Conclusions

- Insufficient evidence to support measurement of those markers
- Knowledge gaps:
  - Added clinical value
  - Predictive value of conventional factors (BMI, sedentarity, etc...) not fully exploited in current SCORE

# Recommendations

## Clinicians

- No atherosclerosis markers in routine practice for CVD prediction

## Research

- Integrate other conventional risk factors to SCORE
- Evaluate added value of markers against this new SCORE
